Ig heavy chain V region - human (fragment)
C; Species: Homo sapiens (man)
C; Species: Homo sapiens (man)
C; Accession: $31666
R; Culsinier, A. M.; Gauthier, L.; Boubli, L.; Fougereau, M.; Tonnelle, C.
submitted to the EMBL Data Library, June 1992
A; Description: Mechanisms that generate human immunoglobulin diversity operate from A; Reference number: $31585
A; Accession: $31666
A; Status: preliminary
A; Molecule type: mRNA
A; Residues: 1-138 <CUI>A; Cross-references: EMBL: 214202; NID: 930963; PIDN: CAA78571.1; PID: 930964
C; Superfamily: immunoglobulin V region; immunoglobulin homology
C; Keywords: heterortetramer; immunoglobulin
C; Keywords: heterortetramer; immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 B 5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                   Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 QY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a linker component of a modified human C serv antibody which has specific affinity for a characteristic epitope C of the ED-B domain of fibronectin. The affinity of the antibody for C this epitope was improved by introducing a number of mutations in the C complementarity determining region (CDR) residues located at the C complementarity determining region (CDR) residues located at the C periphery of the binding site. The improved antibody is used for rapid C targeting markers of angiogenesis, for detecting diseases characterized C by vascular proliferation, such as diabetic retinopathy, age-related C macular degeneration or tumours. The antibody localizes the respective tissue within 3 to 4 hours after injection. It is used in C immunoscintigraphic detection of angiogenesis and for diagnosis and C therapy of tumours and diseases characterized by vascular proliferation. The antibody can be conjugated to a molecule which induces blood C coagulation and blood vessel occlusion. These conjugates are used in C andiogenesis-related pathologies, especially or the treatment of the preparation of injectable compositions for the treatment of the preparation and pathologies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

An antibody with improved affinity to the ED-B domain is useful for diagnosis and therapy of tumours and diseases characterised by vascular proliferation, cancer, rheumatoid arthritis, neo-vasculature associated coular disorders and psoriasis. Treatment of angiogenesis related pathologies comprises the injection of conjugates comprising antibody and a molecule capable of inducing blood coagulation and blood vessel occlusion. The present sequence is a peptide linker used for constructing single-chain variable antibody fragment (scFV) L19 antibody related to the invention.
                                                                                                                                                                                                                                            (EIDG-) EIDGENOESSISCHE TECH HOCHSCHULE

```

The present sequence represents a modified human scFv antibody which has specific affinity for a characteristic epitope of the ED-B domain of fibronectin. The affinity of the antibody for this epitope was improved by introducing a number of mutations in the complementarity determining region (CDR) residues located at the periphery of the binding site. The improved antibody is used for rapid targeting marker of angiogenesis, for detecting diseases characterized by vascular proliferation, such as diabetic retinopathy, age-related macular proliferation or tumours. The antibody localizes the respective tissue

markers

within 3 to 4 hours after

The antibody can conjugated to a molecule which induces blood coagulation and blood vessel occlusion. These conjugates are used in the preparation of injectable compositions for the treatment of angiogenesis related pathologies, especially caused by or associated with ocular angiogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                immunomodulatory; cytostatic; neuroprotective; vulnerary; nootropic; anticonvulsant; antiarthritic; cerebroprotective; antifungal; antiviral; antibacterial; antiallergic; dermatological; haemostatic; antialtergic; dermatological; haemostatic; antialtergic; dermatological; haemostatic; immunogen; antibody; gene therapy; neurological disorder; parkinson's disease; inflammatory disorder; cancer; asthma; osteoporosis
The invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human novel protein #96.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  24-OCT-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          raise antibodies/elicit an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Polypeptides of the invention may also be useful in treating platelet disorders, stem cell disorders, regenerating bone, cartilage, tendon, ligament and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a contraceptive, treating osteoporosis and osteoarthritis, aneamia, Alzheimer's, Parkinson's and Huntington's diseases, amylotrophic lateral sclerosis, stroke, immune deficiencies resulting from bacterial, viral or fungal infection or from autoimmunity, cancer, allergy, asthma, graft-versus-host diseases, eczema, haemophilia, thrombosis, anti-inflammatory diseases, nervous system disorders, and infection. The present sequence represents a protein of the invention.

rne invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of antibodies raised and prevention of disorders caused by the aberrar protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used.
                                                                                                                                                                                              Tang
                                                                                                                                                                                                                                                                                       02-AUG-2001

Polypeptides of the invention may also be useful, in treating platelet disorders, stem cell disorders, regenerating bone, cartilage, tendon, ligament and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a contraceptive, treating osteoporosis and osteoarthritis, anaemia, alzheimer's, Parkinson's and Huntington's diseases, amylotrophic lateral sclerosis, stroke, immune deficiencies resulting from bacterial, viral or graft-versus-host disease, eczema, haemophilia, thrombosis, anti-inflammatory diseases, nervous system disorders, and infection. The present sequence represents a protein of the invention.
The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
                                                         The invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to
            raise antibodies/elicit an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands Polypeptides of the invention may also be useful in treating platelet
                                                                                                                                                                                                                                                                                                 Example 4; Page 824-825;
                                                                                                                                                                                                                                                                                                                               Isolated polypeptides useful for treating anti-inflammatory diseases, nervous system disorders, and for regenerating bone and cartilage -

These were derived from expressed sequence to from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence protein of the invention.

The invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to

treatment of a mammal and prevention of disorders caused by the aberran protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and
                                                                  proteins or their active domains. The polypeptides, polypucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberran
                                                                                                              The invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or CRNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to craise antibodies/elicit an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Polypeptides of the invention may also be useful in treating platelet contracts, stem cell disorders, regenerating bone, cartilage, tendon, cliquenent and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a contraceptive, treating osteoporosis and osteoarthritis, anaemia, cliptered the proliferation of stemcoporosis and osteoarthritis, anaemia, contraceptive, treating osteoporosis and osteoarthritis, anaemia, contraceptive, parkinson's and Huntington's disease, amylotrophic lateral sclerosis, stroke, immune deficiencies resulting from bacterial, viral or fungal infection or from autocimmunity, cancer, allergy, asthma, cancient states and infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

Polypeptides of the invention may also be useful in treating platelet disorders, stem cell disorders, regenerating bone, cartilage, tendon, ligament and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a contraceptive, treating osteoporosis and osteoarthritis, anaemia, Alzheimer's, Parkinson's and Huntington's diseases, amylotrophic lateral alcerosis, stroke, immune deficiencies resulting from bacterial, viral or fungal infection or from autoimmunity, cancer, allergy, asthma, graft-versus-host disease, eczema, haemophilla, thrombosis, anti-inflammatory diseases, nervous system disorders, and infection. The present sequence represents a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to the production of the compound of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the invention can be used to the sense of the inventi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

```
CC of interest invention describes a method for isolating a polynucleotide CC of interest that is present or is expressed in a genome of a first CC mycobacterium strain and that is absent or altered in a genome of a CC using a bacterial artificial chromosome (BAC) vector. Recombinant BAC CC vectors, which are preferably immobilised, can be used to detect CC mycobacterial nucleic acids (genomic DNA, cDNA or mRNA) in biological CC mycobacterial nucleic acids (dentified are useful as probes or primers CC samples. The polynucleotides identified are useful as probes or primers CC polynucleotides contained in the recombinant BAC vectors it is possible to compare a polynucleoterium of interest. By aligning the CC to physically map a polynucleoterium of interest. By aligning the CC to physically map a polynucleoterium of interest and vectors it is possible to compare genomes between different strains or species and their non-pathogenic strains or species counterparts. ABG62422 to ABB81227 to ABB81230 represent sequences used in the present invention of exemplification of the present invention.

This sequence is the Raly (RNP associated with lethal yellow) protein, CC DNA encoding it can be used in a specific engineered fragment (SEF). CC The invention relates to gene targeting vectors that comprise 2 yeast selectable markers, a mammalian cell selectable marker and gene-specific CC prepared by a method, comprising: (a) preparing a shuttle vector CC comprising a first yeast selectable marker, a bacterial selectable CC comprising a first yeast selectable marker, a bacterial selectable CC comprising a second yeast selectable marker cassette, the CC marker cassette comprising a second yeast selectable marker capable of CC expression in mammalian embryonic stem cells and the marker cassette of being flanked on each side by mammalian gene-specific flanking sequences (CC allowing the shuttle vector and the SEF to recombination; (d) selecting the transformed yeast (c) transforming CC allowing the shuttle vector and the SEF to recombination; (d) selecting the transformed yeast cells for expression (CC targeting vector produced by recombination between the shuttle vector and the SEF to recombine by homologous (CC targeting vector produced by recombination between the shuttle vector and the SEF to recombine by homologous (CC targeting vector produced by recombination between the shuttle vector and the SEF to recombine by homologous (CC targeting vector produced by recombination between the shuttle vector and the SEF to recombine by homologous (CC and sequence information are not regulatory sequences into preselected of genes and their roles in diseases Using the method, detailed mapping constructs or restriction sites which results in a significant saving of time and effort in preparing targeting constructs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 13

                                                                                                                                                                                                                                                                                        The invention relates to a novel haematopoletic protein (HP) comprising CC R2-R1; where R1 and R2 are independently selected from: (I) a modified CC R2-R1; where R1 and R2 are independently selected from: (I) a modified CC (II) a modified human granulocyte-colony stimulating factor (hG-CSF) AA sequence; CC (II) a modified human interleukin-3 (hIL-3) AA sequence; (III) a modified CC (II) a modified human interleukin-3 (hIL-3) AA sequence; (III) a modified CC linker capable of linking R1 to R2. This sequence represents an example CC vectors comprising the nucleic acid molecules are useful for the CC vectors comprising the nucleic acid molecules are useful in CC recombinant production of HP. The nucleic acid molecules are useful in CC gene therapy. The HPs's are useful for stimulating the production of CC haematopoietic cells in patients, selective ex vivo expansion of stem CC can be treated include leukopaenia, neutropeenia, aplastic anaemia and CC thrombocytopaenia. In vitro uses include the ability to stimulate bone can prove the construction and growth before infusion into the

                                                                                                                                      A new fusion protein is disclosed which has the formula R1-L-R2, CC R2-L-R1, R1-R2, R2-R1, R1-L-R1 or R1-R1, where R1 is a mutant or CC variant of human interleukin-3 (hIL-3), R2 is a second colony CC stimulating factor (CSF) including cytokine, lymphokine, interleukin, CC stimulating factor (CSF) including cytokine, lymphokine, interleukin, CC which the present sequence is a specific example). Generic sequences CC are described in AAR03235 - AAR03242, and specifically claimed examples CC are shown in AAR79298-R79335 and AAR79342-R79345. The fusion protein is CC are shown in AAR79298-R79335 and AAR79342-R79345. The fusion protein is CC sequences which encode these proteins are shown in AAQ97167-097204 and CC eall production. It is also useful as an IL-3 antagonist or as a CC cell production. It is also useful as an IL-3 antagonist or as a CC cell production. It is also useful as an IL-3 antagonist or as a CC cell production. It is also useful as an IL-3 antagonist or as a CC cell production. It is also useful as an IL-3 antagonist or as a CC cell production of cappent for production of antibodies useful in CC growth of certain cancer cells and in treatment of asthma. The fusion CC growth of certain cancer cells and in treatment of asthma. The fusion CC construction and growth in vitro before infusion; and to treat diseases activation and growth in vitro before infusion; and to treat diseases activation and activity of both its component proteins, but may have increased synergistic activity and reduced undesired side effects.

   Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                              Score
